PROFILE

Senior Engineering Manager focused on predictable delivery and engineering excellence. I advocate for strong automated testing and clear service ownership to keep systems stable and change safe. Over an international career, I have led distributed teams across time zones and partnered closely with product and stakeholders to deliver outcomes. I lead with empathy and direct communication, building strong teams that deliver predictably through change.

WORK EXPERIENCE

Senior Engineering Manager | 12 engineers (Sweden/India; CET/IST)

Flexera, Stockholm / April 2025 - Current

Lead two software development teams. Own talent development, recruitment, coaching, and performance management across engineers from junior to principal level. Partner with PMs/POs on prioritisation, capacity planning, and delivery commitments, with a focus on clear trade-offs and predictable execution. Drive cross-team alignment through crisp communication and pragmatic delivery practices.

- **Zero Downtime Deployment:** enabled self-service report deployments (PowerBI) by automating the deployment pipeline, removing manual intervention and reducing dependency bottlenecks for downstream teams
- **Notification Service:** launched a platform service to standardise customer notifications, improving consistency and enabling reuse across products
- **Cross-sell enablement:** led initiatives aligning Snow Atlas and Flexera One post-acquisition, accelerating shared delivery

Engineering Manager (Formerly Snow Software)

Flexera, Stockholm / September 2022 - April 2025

Engineering Manager for cloud platform teams, with scope varying from 2 to 14 engineers (primarily Sweden, plus one engineer in the UK). Started with one team and later took over an additional team, scaling leadership scope while maintaining delivery and team health.

- **Snow Atlas data ingestion pipeline:** led the team through launching a modern ingestion pipeline for inventory data from thousands of Snow agents running on customers' devices, moving ingestion into the microservices-based Snow Atlas platform
- **File Manager service:** delivered a standard platform service for document and file storage at Snow Software, adopted by multiple teams as the default storage mechanism and reducing repeated "build-your-own" implementations
- **Acquisition change leadership:** prepared and supported the team through the acquisition by Flexera, keeping people focused and productive during uncertainty through transparent communication, active coaching, and practical change management
- Maintained strong retention through a challenging transition period, preserving domain knowledge and delivery continuity

- Led talent development, recruitment, coaching, and performance management across a wide seniority range, creating clarity on expectations, ownership, and growth paths
- Partnered with PM/POs and stakeholders on prioritisation, capacity planning, and delivery execution, managing dependencies and trade-offs to keep delivery predictable
- Enabled engineering excellence through pragmatic delivery practices, clear ownership, and a quality mindset across service delivery

Sr. Software Developer (Go/.NET) – Formerly Snow Software

Flexera, Stockholm / March 2021 - September 2022

- Built and evolved a data ingestion and data warehousing service (Go/.NET) in a microservices environment
- Produced design proposals and technical specifications; aligned solutions with stakeholders and peer teams
- Implemented and maintained production code with strong automated testing coverage (unit, performance, and end-to-end)

Software Development Manager & Sr. Software Developer .NET/Java

Apica Systems, Stockholm / January 2019 - February 2021

- Led architecture and solution design for customer-facing features and integrations
- Delivered hands-on development in .NET/Java where needed, keeping a strong testing mindset
- Acted as a bridge between engineers and leadership, aligning priorities and execution
- First people-management role: recruitment, onboarding, mentoring, coaching, and performance reviews

Software Architect in .NET

Apica AB, Stockholm / June 2012 - January 2019

- Owned domain modelling, architecture design, and requirements analysis for .NET systems
- Implemented key components and supported delivery across teams
- Improved quality through unit testing and pragmatic engineering practices
- Mentored and coached new team members

Sr. Software Developer in .NET

Apica AB, Stockholm / April 2011 - May 2012

- Developed and maintained .NET features with a focus on clean design and testability

Software Developer in Microsoft .NET

Apica AB, Stockholm / October 2010 - March 2011

- Contributed to .NET application development and maintenance in a delivery-focused team

supply line manager 50% / programmer 50%

STEricsson AB, Stockholm, Stockholm County / July 2008 - September 2010

Supply line manager

STMicroelectronics, Stockholm / January 2007 - June 2008

Business planner

STMicroelectronics, Munich / August 2004 - December 2006

Supply planner

Nokia Mobile Phones, Hungary / October 2003 - August 2004

EDUCATION

MSc, Economics

University of Birmingham / January 2002 - December 2003

BSc, Economics with German

University of Birmingham / January 1998 - December 2002
